

15-minute in-state phone rates increments in U.S state prisons

This visualization shows data on in-state phone rates for 15-minute increments in U.S. 50 states prisons from 2008 to 2021. However, the data by Prison Policy Initiative were not compiled periodically, so the change over the time range only gives a general sense of how in-state phone rates vary over time. The states are arranged in alphabetical order.

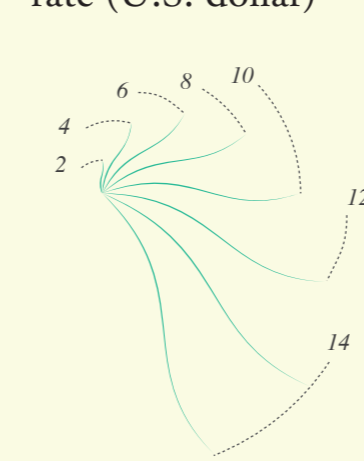

Source: Prison Policy Initiative

Curved line = In-state phone rates for 15-minute increments in the state prisons from 2008

Each line represents one year

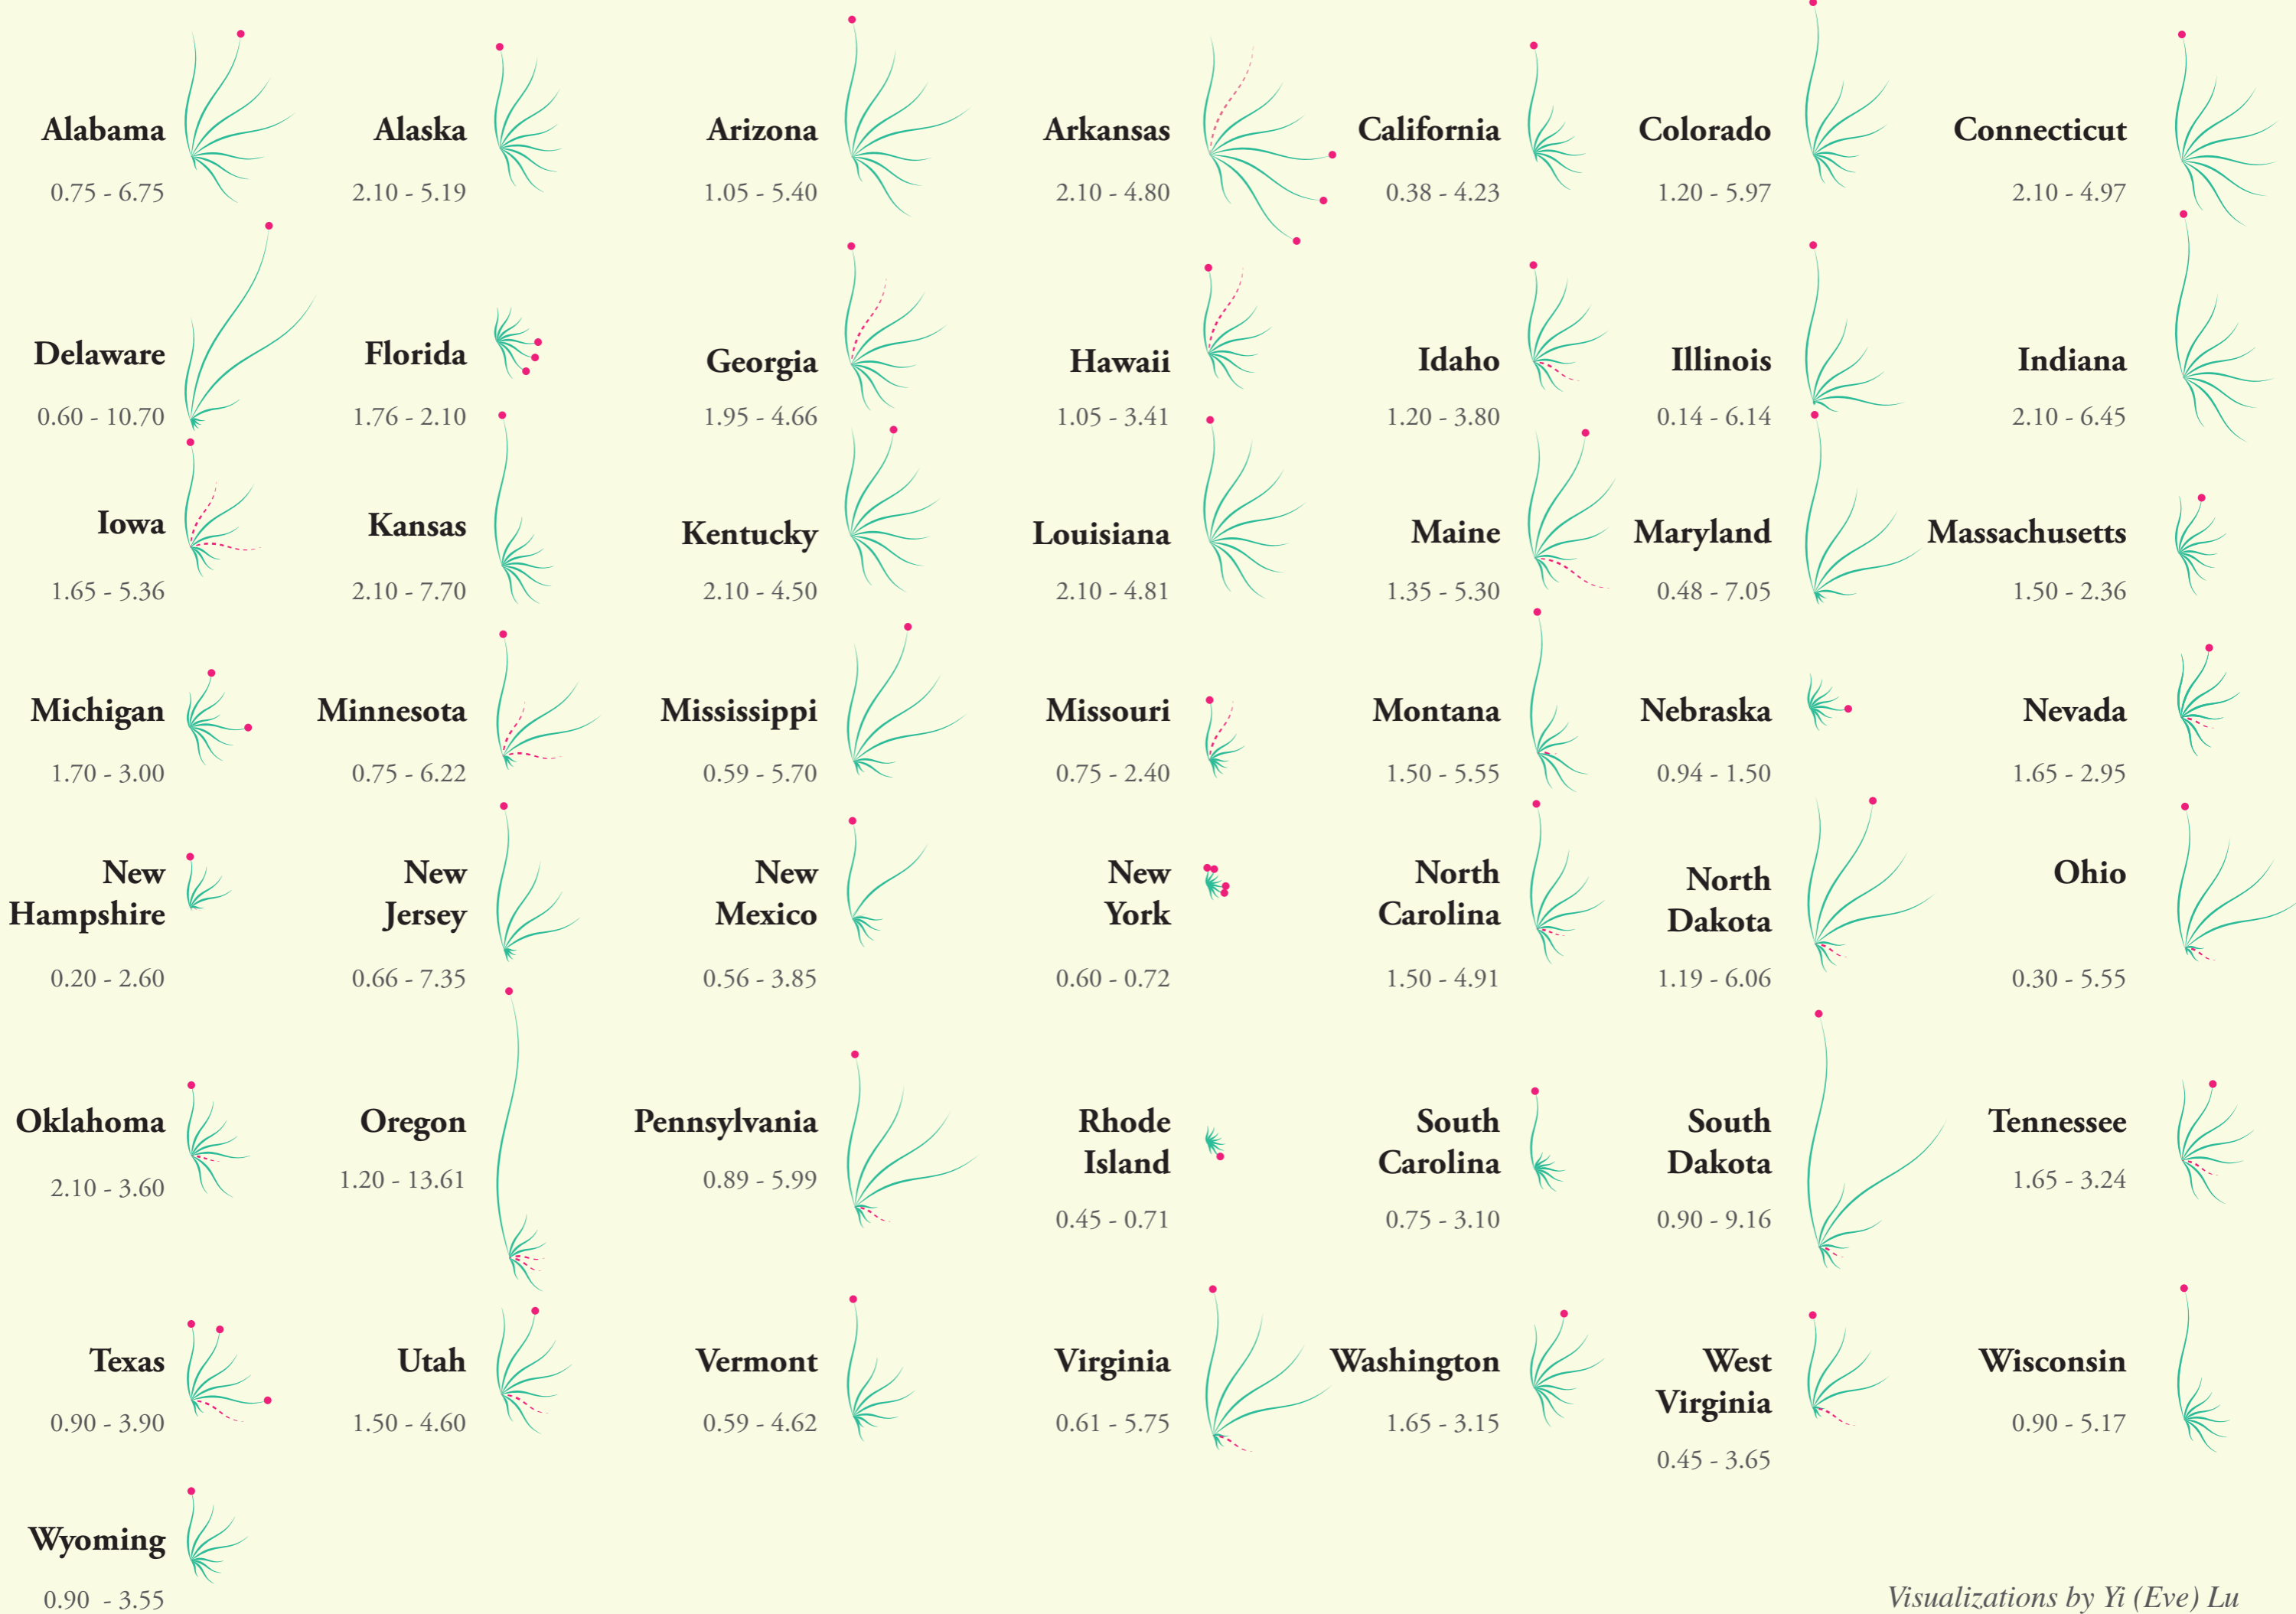

Line length = In-state phone rate (U.S. dollar)

The dot highlights the year(s) with the highest phone rate in that state with the indicated time range

The dashed line represent the year that lacks the data
